dev.=1.2

7. Student Demographics:

7.1) How many credits have you completed toward your degree or certificate?

0 - 30 completed credits 0%

31 - 60 completed credits 9.1%

61 - 90 completed credits 54.5%

91 + completed credits 36.4%

n=11

7.2) This course is instructed as:

a face-to-face course 0%

a hybrid/blended course (a combination of face-to-face and online instruction) 0%

an online synchronous (students are required to participate online at a specific time) 0%

an online asynchronous (students view course materials at any time) 100%

n=11

7.3) This term I am currently enrolled in:

7.4) My current major is:

7.5) I am currently a high school student taking college courses.

Comments Report

6. Open Response:

6.1) What are the strengths of this course?

- Lots of Excel sheets.
- That there are lots of tutorials. The material is lots of excel functions which I am comfortable with. The timeline for assignments due was nicely set.
- The amount of work is well distributed through out the 8 weeks.
- The instructions
- The instructor responds to questions and returns grades with feedback in a timely manner and the assignments align with the syllabus.
- The varied stats theory used by excel and how to use them.
- lots of resources for the problems

6.2) What changes would you recommend that would improve this course?

- Better lessons to understand the material. The way the instructor was "teaching" the material was simply using the same verbiage as the book and never once breaking it down to actually help us understand it.
- Hard to understand how the stuff on the mid-term connected back to what was on the Excel sheets.
- I felt that maybe more explanation on how or what she would have liked the 'explanations' to include would have been a little helpful. However, overall this is a good course.
- Make sure there is a foundation of stat theory, this course shows how to use excel not so much the theory behind the math.
- Need a different textbook, the Excel guide was not sufficient for me.
- None
- The professor was clearly knowledgeable in this field, but I was not able to understand alot of what she was saying and ended up having to watch alternative videos from internet. She had the "talk to text" or closed caption on to display what she was saying, but those could not comprehend what she said either and would display random words that it thought she was saying. Overall, it was not that frustrating.. if you watched her videos several times you could guess what she was saying.

6.3) Any further, constructive comments?

- Dr. Li did a good job on trying to tie together the theory with the excel functions, which can be complicated if your weak in the understanding of the math.
- N/A (3 Counts)
- the book for this class was not useful. It gave VERY basic instructions, and this is where any frustration came from.
