## **Brazosport College**

#### Syllabus for PTAC 1432 – Process Instrumentation I

Instructor: Mark Stoltenberg Office Phone: 979-230-3339 Alt. Phone: 979-230-3618 Office: HS.212K Email: mark.stoltenberg@brazosport.edu

## I. COURSE DESCRIPTION:

#### PTAC 1432 - Process Instrumentation I CIP 4103010003

Study of the instruments and instrument systems used in the chemical processing industry including terminology, primary variables, symbology, control loops, and basic troubleshooting. **Credit Hours:** 4 (3 lecture, 2 lab)

Chad Abney

Gregg Curry

Kenneth Resecker

Mark Stoltenberg

Gary Hicks

Dr. Mitchell Seal

Danny Randolph

Karl Grossman

Ed Smolen

**A. Required skill level**: College-level reading and writing. Math: College-level with corequisite (placement code 3).

# II. COURSE OBJECTIVES

TOPIC	OBJECTIVES
Introduction to Instrumentation	<ol> <li>Discuss the evolution and importance of process instrumentation to the process industries.</li> <li>Explain the importance of monitoring process variables.</li> <li>Discuss the operator's leadership role, in relation to safety, when monitoring process variables.</li> <li>Explain the importance of process instrumentation to a process technician:         <ul> <li>Eyes and ears of the process technician</li> <li>Tool for monitoring and troubleshooting process control</li> <li>Effective communications with instrument technician for troubleshooting and repairs</li> </ul> </li> <li>Define terms associated with instrument technician for troubleshooting and repairs</li> <li>Define terms associated with instrumentation:         <ul> <li>local</li> <li>remote</li> <li>indicating</li> <li>recording</li> <li>pneumatic</li> <li>electronic</li> <li>process variables</li> <li>controlling</li> <li>analog</li> <li>digital                  <ul> <li>DCS (Distributive Control Systems)</li> <li>PLC (Programmable Logic Control)</li> <li>control loop</li> <li>differential (delta Δ)</li> <li>split range</li> </ul> </li> <li>Describe the major process variables controlled in the process industries and define their units of measurement:</li> <li>Flow (gallons per minute, pounds per minute, pounds per hour, barrels per hour, etc.)</li> <li>Pressure (psig, psia)</li> <li>Temperature (Fahrenheit, Celsius)</li> <li>Level (percent, inches of water column, interface)</li> <ul> <li>Analytical (ppm, percentage, ratio, pH, etc.)</li> <li>Other (vibration, variable speed control, proximity switches, amp-meter, etc</li></ul></ul></li></ol>

Introduction to Instrumentation (cont.)	<ul> <li>What happens to the pressure in a closed container when temperature increases/decreases?</li> <li>What happens to the temperature in a closed container when pressure increases/decreases?</li> <li>What happens to vessel bottom pressure when height of liquid increases/decreases?</li> <li>What happens to boiling point of a material when pressure increases/decreases?</li> <li>What happens to the volume of a material when temperature increases/decreases?</li> <li>What happens to the density of a material when temperature increases/decreases?</li> <li>What happens to the density of a material when temperature increases/decreases?</li> <li>What happens to the density of a material when temperature increases/decreases?</li> <li>What happens to the differential pressure when the flow increases/decreases?</li> </ul>
Process Variables, Elements, and Instruments - Pressure	<ol> <li>Define units of measurement associated with pressure and pressure instruments:         <ul> <li>PSIG (pounds per square inch gauge)</li> <li>PSIA (pounds per square inch atmospheric)</li> <li>bars</li> <li>Inches H2O</li> <li>Inches Hg (mercury)</li> <li>mm Hg Abs</li> <li>Inches Hg Vac</li> <li>atmospheres</li> </ul> </li> <li>Discuss the formula used to calculate pressure and identify the three components that affect the force exerted by molecules:         <ul> <li>Speed (temperature)</li> <li>number of molecules</li> <li>mass (liquid)</li> </ul> </li> <li>Identify common types of pressure-sensing/measuring instruments used in the process industries:             <ul> <li>gauges</li> <li>differential pressure cells</li> <li>manometers</li> <li>strain gauge</li> </ul> </li> <li>Describe the purpose and operation of pressure-sensing/measuring instruments used in industrial settings.</li> <li>Given a standard calculator and conversion formulas convert between the following pressure scales:             <ul> <li>pounds per square inch gauge (psig) and pounds per square inch absolute (psia)</li> <li>inches of mercury (in. Hg) and inches of water (in. H2O)</li> <li>psi (pounds per square inch) and inches of water column</li> </ul></li></ol>

Process Variables, Elements, and Instruments – Temperature	<ol> <li>Define units of measure associated with temperature and temperature instruments:         <ul> <li>differential (delta)</li> <li>temperature scales                 <ul> <li>Fahrenheit</li> <li>Celsius/Centigrade</li> </ul> </li> </ul> </li> <li>Describe the effect heat energy has on the movement of molecules.</li> <li>Identify common types of temperature-sensing/measurement devices used in the process industries:                 <ul> <li>resistance temperature detector (RTD)</li> <li>thermometer</li> <li>thermocouple</li> <li>temperature gauge</li> <li>bimetallic strip</li> </ul> </li> <li>Describe the purpose and operation of various temperature sensing/measurement devices used in the process industries.</li> <li>Given a standard calculator and conversion formulas, complete Fahrenheit and Celsius conversion</li> </ol>
Process Variables, Elements, and Instruments – Level	<ol> <li>Define terms associated with level and level instruments:         <ul> <li>ullage (outage)</li> <li>innage</li> <li>interface level</li> <li>direct/indirect measurement</li> <li>meniscus</li> </ul> </li> <li>Identify common types, purposes, and operation of levelsensing/measuring devices used in the process industries:         <ul> <li>gauge/sight-glass (reflex or clear glass)</li> <li>differential pressure cells</li> <li>floats</li> <li>displacer</li> <li>bubblers</li> <li>nuclear devices</li> <li>ultrasonic devices</li> <li>tape/ball</li> <li>radar</li> </ul> </li> <li>Discuss hydrostatic head pressure in relation to level measurement.</li> <li>Describe the level control as it relates to the temperature, density, and volume of liquid.</li> </ol>
Process Variables, Elements, and	<ol> <li>Define terms associated with flow and flow measuring instruments:         <ul> <li>fluids (gases and liquids)</li> <li>metered displacement</li> <li>laminar</li> </ul> </li> </ol>

Flow       • differential pressure         Process       • weight measurement         2. Identify the most common types of flow-sensing and measuring devices used in the process industries and their purposes and operation:         elements, and Instruments - Flow       • orifice plate         (cont.)       • orifice plate         instruments - Flow       • orifice plate         (cont.)       • orifice plate         • venturi tube       • pitot tube (Annubar)         • rotameters       • magneter         • turbine meters       • magneter         • ultrasonic meter       • ultrasonic meter         • others       3. Describe the purpose and operation of flow-sensing/measurement devices used in process industries.         4. Explain the difference between total volume flow and flow rate.       5. Explain the difference between mass flow and volume flow.         Process       1. Define terms associated with analytical instruments:         Variables,       • H (acid/base) and ORP (oxidation reduction potential)         • Chromatography       • Combustion         • TOC (total organic carbon)       2. Identify the most common types of analytical devices used in the process industries:         • gas/liquid chromatograph       • ORP (oxidation reduction potential)/ pH meter         • conductivity meter       • Color analyzers         • optical ana	Instruments –	• turbulant
Process Variables, Elements, and Instruments - Flow2. Identify the most common types of flow-sensing and measuring devices used in the process industries and their purposes and operation: • orifice plate • venturi tube • flow nozzle • piot tube • flow nozzle • piot tube • multiport pitot tube (Annubar) • rotameters • magneter • turbine meters • magneter • ultrasonic meter • othersProcess Variables, Elements, and Instruments - Analytical1. Define terms associated with analytical instruments: • piot cube of the most common types of analytical devices used in the process industries.Process Variables, Elements, and Instruments - Analytical1. Define terms associated with analytical instruments: • pfl (acid/base) and ORP (oxidation reduction potential) • combustion • TOC (total organic carbon)2. Identify the most common types of analytical devices used in the process industries: • gas/liquid chromatograph • ORP (oxidation reduction potential)/ pH meter • conductivity • Optical Measurements • Chromatograph • ORP (oxidation reduction potential)/ pH meter • conductivity meter • Color analyzers • optical analyzers • optical analyzers • turbidity analyzer/meter • TOC (total organic carbon) analyzer • spectrophotometers • a. UV (ultraviolet)/VIS (visible)		• turbulent
Process Variables, Elements, and Instruments – Flow       2. Identify the most common types of flow-sensing and measuring devices used in the process industries and their purposes and operation:         • orifice plate       • venturi tube         • flow nozzle       • piot tube         (cont.)       • orifice plate         • unultiport pitot tube (Annubar)       • rotameters         • magneter       • turbine meters         • mass flow meter (Coriolis)       • vortex meter         • ultrasonic meter       • ultrasonic meter         • others       3. Describe the purpose and operation of flow-sensing/measurement devices used in process industries.         Process       • Define terms associated with analytical instruments:         Variables, Elements, and Instruments – Analytical       1. Define terms associated with analytical instruments:         • pt (acid/base) and ORP (oxidation reduction potential)       • conductivity         • Optical Measurements       • Chromatography         • Combustion       • TOC (total organic carbon)         2. Identify the most common types of analytical devices used in the process industries:         • gas/liquid chromatograph       • ORP (oxidation reduction potential)/ pH meter         • Color analyzers       • turbidity analyzer/meter         • ORP (oxidation reduction potential)/ pH meter       • conductivity meter         • Color an	LIOW	
Process       devices used in the process industries and their purposes and operation:         Elements, and Instruments – Flow       orifice plate         (cont.)       into tube         (cont.)       pitot tube         multiport pitot tube (Annubar)       rotameters         magneter       turbine meters         mass flow meter (Coriolis)       vortex meter         ultrasonic meter       others         3. Describe the purpose and operation of flow-sensing/measurement devices used in process industries.         4. Explain the difference between total volume flow and flow rate.         5. Explain the difference between total volume flow.         Process       1. Define terms associated with analytical instruments:         Variables,       pH (acid/base) and ORP (oxidation reduction potential)         Elements, and Instruments – Analytical       Optical Measurements         Analytical       TOC (total organic carbon)         2. Identify the most common types of analytical devices used in the process industries:         gas/liquid chromatograph       ORP (oxidation reduction potential)/ pH meter         • Color analyzers       turbidity analyzer/meter         • Oogetty analyzers       turbidity analyzer/meter         • Optical analyzers       turbidity analyzer/meter         • opotical analyzers       turbidity analyzer/met		
Variables,       Elements, and         Instruments -       Flow         Flow       • orifice plate         • venturi tube       • flow nozzle         (cont.)       • pitot tube         • multiport pitot tube (Annubar)       • rotameters         • magneter       • turbine meters         • magneter       • turbine meters         • orifice plate       • vortex meter         • ultrasonic meter       • ultrasonic meter         • others       3. Describe the purpose and operation of flow-sensing/measurement devices used in process industries.         4. Explain the difference between total volume flow and flow rate.       5. Explain the difference between mass flow and volume flow.         Process       1. Define terms associated with analytical instruments:         Variables,       Elements, and         Elements -       Analytical         1. Define terms associated with analytical instruments:         • pI (acid/base) and ORP (oxidation reduction potential)         • conductivity         • Optical Measurements         • Chromatograph         • OC (total organic carbon)         2. Identify the most common types of analytical devices used in the process industries:         • gas/liquid chromatograph         • ORP (oxidation reduction potential)/ pH meter	Process	
Elements, and Instruments – Flow       • orifice plate         (cont.)       • orifice plate         • venturi tube       • flow nozzle         (cont.)       • pitot tube         • multiport pitot tube (Annubar)       • rotameters         • magneter       • turbine meters         • mass flow meter (Coriolis)       • vortex meter         • ultrasonic meter       • others         3. Describe the purpose and operation of flow-sensing/measurement devices used in process industries.         4. Explain the difference between total volume flow and flow rate.         5. Explain the difference between mass flow and volume flow.         Process         Variables,         Elements, and         Instruments –         Analytical         1. Define terms associated with analytical instruments:         • pH (acid/base) and ORP (oxidation reduction potential)         • conductivity         • Optical Measurements         • Chromatography         • Combustion         • TOC (total organic carbon)         2. Identify the most common types of analytical devices used in the process industries:         • gas/liquid chromatograph         • ORP (oxidation reduction potential)/ pH meter         • colouctivity meter         • colouctivity meter		
Instruments - Flow       ion the place         (cont.)       ion the place         if low nozzle       if low nozzle         (cont.)       ip tot tube         in multiport pitot tube (Annubar)       in rotameters         in magmeter       turbine meters         in magmeter       turbine meters         in magmeter       iuftiport pitot tube (Annubar)         vortex meter       iuftiport pitot meter         in ultrasonic meter       others         3.       Describe the purpose and operation of flow-sensing/measurement devices used in process industries.         4.       Explain the difference between total volume flow and flow rate.         5.       Explain the difference between mass flow and volume flow.         Process         Variables,       Elements, and         Elements, and       instruments -         Analytical       Optical Measurements         Optical Measurements       Optical Measurements         Chromatography       Combustion         TOC (total organic carbon)       2.         2.       Identify the most common types of analytical devices used in the process industries:         gas/liquid chromatograph       ORP (oxidation reduction potential)/ pH meter         Color analyzers       optical analyzer/me		1
Flow       • Ventur tube         (cont.)       • flow nozzle         (cont.)       • pitot tube         • multiport pitot tube (Annubar)         • rotameters         • magmeter         • turbine meters         • mass flow meter (Coriolis)         • vortex meter         • ultrasonic meter         • others         3. Describe the purpose and operation of flow-sensing/measurement devices used in process industries.         4. Explain the difference between total volume flow and flow rate.         5. Explain the difference between mass flow and volume flow.         Process         Variables, Elements, and Instruments - Analytical         Instruments - Analytical         Analytical         1. Define terms associated with analytical instruments:         • pH (acid/base) and ORP (oxidation reduction potential)         • conductivity         • Optical Measurements         • Chromatography         • Combustion         • TOC (total organic carbon)         2. Identify the most common types of analytical devices used in the process industries:         • gas/liquid chromatograph         • ORP (oxidation reduction potential)/ pH meter         • color analyzers         • optical analyzers         • turbi		-

Process Variables, Elements, and Instruments – Analytical (cont.)	<ul> <li>LEL (lower explosive limits)</li> <li>3. Explain the purpose of analytical devices used in process industries.</li> <li>4. Explain how analytical data affects the role of the process technician.</li> <li>5. Review the difference between online versus laboratory analysis.</li> </ul>
Miscellaneous Measuring Devices	<ol> <li>Define terms associated with miscellaneous measuring devices:         <ul> <li>load cells</li> <li>density</li> <li>vibration</li> <li>rotational speed</li> <li>amperage</li> <li>decibels</li> </ul> </li> <li>Identify common types of miscellaneous measuring devices:         <ul> <li>Vibration meter</li> <li>load cells</li> <li>proximity sensors (pickups for speed)</li> <li>Amp meters.</li> <li>decibel meters, etc.</li> </ul> </li> </ol>
Introduction to Control Loops (Simple Loop Theory)	<ol> <li>Explain the function of a control loop.</li> <li>Describe process control loop elements:         <ul> <li>Process Variables (PV)</li> <li>measuring means (primary element/transmitter)</li> <li>controller (set point)</li> <li>final control element (valve or louvers)</li> </ul> </li> <li>Explain signal transmission:         <ul> <li>Pneumatic</li> <li>Electronic</li> <li>Analog</li> <li>Discrete</li> <li>Digital</li> <li>mechanical</li> </ul> </li> <li>Classify the functions of a control scheme:         <ul> <li>Sensing</li> <li>Measuring</li> <li>comparing</li> <li>transducing-(converting)</li> <li>controlling</li> </ul> </li> <li>Review the differences between "open" and "closed" control loops.</li> <li>Explain the purpose of instrument air systems:             <ul> <li>Instrument air</li> <li>Nitrogen</li> </ul> </li> </ol>

	Process gases	
Control Loops: Controllers	<ol> <li>Explain the terms associated with controllers:         <ul> <li>direct acting</li> <li>reverse acting</li> <li>set point</li> <li>auto/manual switch</li> <li>local/remote switch</li> <li>tuning</li> </ul> </li> </ol>	
	<ul> <li>proportional band/gain</li> </ul>	
	o integral/reset	
	o derivative/rate	
	<ol> <li>Given a drawing or actual device, identify and explain the operation of the following:         <ul> <li>local controller</li> <li>remote controller</li> <li>split-range controller</li> <li>ratio controller</li> <li>Cascade/Remote Set Point (RSP) controller</li> </ul> </li> <li>Identify an application which would require the following devices:         <ul> <li>local controller</li> <li>remote controller</li> <li>remote controller</li> <li>remote controller</li> <li>remote controller</li> <li>ratio controller</li> <li>ratio controller</li> <li>cascade controller</li> <li>cascade controller</li> <li>Cascade controller</li> </ul> </li> <li>Explain "bumpless" transfer of auto to manual-control.</li> <li>Explain the "bumpless" transfer of manual to auto control.</li> <li>Explain the process for switching from auto control to manual control on a local controller.</li> <li>Explain the process for switching from manual control to automatic control on a local controller.</li> <li>Demonstrate various control skills, such as:             <ul> <li>make set point adjustments on a local controller</li> <li>operate a local controller in manual mode</li> <li>make set point adjustments on a remote controller</li> <li>switch from manual to automatic control on a remote controller</li> </ul> </li> </ol>	
Control Loops: Primary Sensors, Transmitters, and Transducers	<ol> <li>Explain the function of measuring instruments (pressure, temperature, level, and flow) and review their role in the overall control loop process.</li> <li>Explain the purpose and operation of the transmitter (D/P Cell) in a control loop.</li> </ol>	

Control Loops: Primary Sensors, Transmitters, and Transducers (cont.)	<ol> <li>Compare and contrast the transmitter input and output signals (communication).</li> <li>Discuss differential pressure cell (D/P) in relation to the transmitter signal.</li> <li>Explain the function of a transducer (signal converter):         <ul> <li>I (current) to P (pneumatic)</li> <li>P (pneumatic) to I (current)</li> </ul> </li> <li>Compare and contrast the relationship between air (3 psig to 15 psig) and electric signals (4 ma to 20 ma).</li> <li>Given an example of a process control scheme, demonstrate how a control loop functions.</li> </ol>
Switches, Relays, Alarms	<ol> <li>Explain the purpose and function of a switch.</li> <li>Explain the purpose and function of a relay.</li> <li>Explain the purpose and function of an alarm.</li> <li>Review placement and use of a switch within a control loop (open and closed).</li> <li>Review the placement and use of a relay within a control loop (open and closed) and in a process unit.</li> <li>Review the placement and use of an alarm within a control loop (open and closed) and in a process unit.</li> <li>Review the placement and use of an alarm within a control loop (open and closed) and in a process unit.</li> <li>Identify switches, relays, and alarms on a Piping &amp; Instrumentation Diagram.</li> </ol>
Instrument Air Systems	<ol> <li>Discuss potential causes of instrument air failure:         <ul> <li>Compressor shuts down</li> <li>Wet/dew point (dryers)</li> <li>Plugging (scale, rust)</li> <li>Backup air failure</li> <li>Regulator failure</li> <li>Incorrect manifold alignment</li> </ul> </li> <li>Discuss corrective actions for each of the following scenarios:         <ul> <li>Compressor shut down</li> <li>Wet (dew point)</li> <li>Plugging</li> <li>Backup air failure</li> <li>Regulator failure</li> <li>Incorrect manifold alignment</li> </ul> </li> </ol>
Control Valves and Final Control Elements	<ol> <li>Explain the purpose and operation of the following:         <ul> <li>control valves</li> <li>three-way valve</li> <li>gate valve</li> <li>globe valve (needle valve)</li> <li>butterfly valve</li> </ul> </li> <li>Explain the purpose and operation of the following:</li> </ol>

PTAC 1432 Process Instrumentation I

	• valve positioner
	<ul> <li>manual operation (hand-jack)</li> </ul>
	<ul> <li>transducer (converter)</li> </ul>
<b>Control Valves</b>	3. Define terms associated with valves and other final control
and Final	elements:
<b>Control Elements</b>	• "air to close" (fail open)
(cont.)	<ul> <li>"air to open" (fail closed)</li> </ul>
	<ul> <li>fail last/in-place/as is</li> </ul>
	<ul> <li>double-acting piston valve actuator</li> <li>solenoid</li> </ul>
	• variable speed motor
	4. Given a drawing or actual device, identify the main components of a control valve:
	• Body
	• Bonnet
	• Disc
	• Actuator
	• Stem
	• Seat
	• Spring
	Valve positioner
	• Hand-jack
	5. Illustrate three types of final control elements and provide an
	application for each type:
	• control valve – manipulates a process flow (liquid/gas) in
	response to a control signal
	• damper/louver – manipulates an air flow to control draft setting
	or temperature setting
	• motor – start, stop or variable speed in response to a control
	signal
	6. Explain the role of the final control element as it relates to the
	process and the control loop.
	7. Given a drawing or actual instrument, identify and describe the
	operation of the following:
	• instrument air regulator
	• louver, damper, final control element
	• variable speed motor used as a final control element
	8. Review reasons why the action of a valve actuator may not
	correspond with the action of the valve:
	Calibration
	Valve stroke
	Direct versus indirect action
	Incorrect air supply pressure / contamination
	Sticking valve

Control Valves and Final Control Elements (cont.)	<ul> <li>Transducer operation</li> <li>Review actions for troubleshooting the items in number 7.</li> <li>10. Compare and contrast a spring and diaphragm actuator to a cylinder actuator.</li> <li>11. Explain the purpose of a valve positioner and describe its operation.</li> <li>12. Review the function of each of the three gauges located on a pneumatic valve positioner: <ul> <li>Air supply</li> <li>Signal</li> <li>Output signal to actuator</li> </ul> </li> <li>13. Given a signal pressure from an I/P determine what the valve position should be for the following: <ul> <li>Fail open</li> <li>Fail closed</li> </ul> </li> </ul>
Interlocks and Safety Features	<ol> <li>Explain the purpose of interlocks:         <ul> <li>Safety</li> <li>Process</li> </ul> </li> <li>Review the purpose of safety features:         <ul> <li>Interlocks and valve actions</li> <li>ESD (Emergency Shutdown Devices)</li> <li>Limit switches (proximity, permissive)</li> <li>Redundant instrumentation</li> <li>Fail safe position</li> <li>Overspeed</li> </ul> </li> <li>Discuss potential consequences for bypassing or ignoring any of the safety features listed above.</li> </ol>
Symbology; Process Diagrams – Part 1	<ol> <li>Review the types of drawings that contain instrumentation that an operator might use.</li> <li>Explain the lettering and numbering standards based on ISA (Instrumentation Society of Automation) instrumentation symbols. (Legend)</li> <li>Demonstrate how to determine the instrument type from the symbol information.</li> <li>Draw the standards for instrument line symbols:         <ul> <li>Electrical</li> <li>Pneumatic</li> <li>Digital</li> </ul> </li> <li>Using a legend, correctly identify instrumentation on a drawing.</li> </ol>
Process Diagrams – Part 2	<ol> <li>Compare and contrast P&amp;IDs and PFDs.</li> <li>Given a PFD, trace process flows on the drawing and/or in the field locating major equipment.</li> <li>Given a P&amp;ID with a legend, locate and identify the components:</li> </ol>

Instrumentation Sketching Instrumentation Sketching (cont.)	<ol> <li>Given a P&amp;ID, with a control loop, explain the relationship of one piece of instrumentation to another.</li> <li>Given a process flow diagram of a major system, illustrate/draw control loops for the following variables:         <ul> <li>Flow</li> <li>Level</li> <li>Temperature</li> <li>Pressure</li> </ul> </li> <li>Using training resources (process simulator, training unit, etc.) sketch instrumentation control loops.</li> </ol>
Monitoring Process Variables	<ol> <li>Given a P&amp;ID identify key process variables that should be monitored.</li> </ol>
Instrumentation Troubleshooting	<ol> <li>Review the extent of an operator's role when troubleshooting problems with process instruments (i.e., identify and not repair, which may vary between sites).</li> <li>Discuss hazards and consequences of deviation for operating outside normal control range of process variables.</li> <li>Identify typical malfunctions found in primary sensing elements and transmitters.</li> <li>Explain the importance of process knowledge in troubleshooting.</li> <li>Illustrate the proper use of equipment related to process troubleshooting.</li> <li>Discuss safety and environmental issues related to troubleshooting process instruments.</li> <li>Describe the symptoms of incorrect instrument calibration:         <ul> <li>Variation between local sight glass and level transmitter</li> <li>Inconsistency among instruments</li> <li>How do process changes affect accurate measurement?                 <ul> <li>Flow rate</li> <li>Density/specific gravity (composition)</li> <li>Temperature</li> <li>Pressure</li> </ul> </li> </ul> </li> <li>Given a scenario, demonstrate proactive action for correcting an abnormal process variable.</li> <li>Given a simulator or actual device, determine whether a control loop is in or out of control and identify the information used to make the decision.</li> </ol>

# III. STUDENT LEARNING OUTCOME

OUTCOME METHOD OF ASSESSMENT		
	OUTCOME	METHOD OF ASSESSMENT

Describe the various process variables (flow,	Chapters: 1-6
level, pressure, temperature, analytical, etc.)	Questions: 1-25
found in a plant and explain how instruments	
are used to sense, measure, and transmit this	
information to the control system.	
OUTCOME	METHOD OF ASSESSMENT
Using knowledge of symbols, process	Chapter: 7
diagrams and instrumentation, sketch a simple	Questions: 26-32
process diagram, including control loops.	
Identify the types of control loops (simple and	Chapters: 10, 12, 14-16
complex) and explain their operation.	Questions: 33-58
Identify the components of a closed control	Chapters: 10-13
loop (primary element, transmitter, controller,	Questions: 59-76
transducer, final element) and explain their	
interrelationships.	
Identify typical instrument malfunctions found	Chapters: 22-23
in control loops and explain how they may	Questions: 77-88
affect a process (cause and effect).	

#### IV. TEXTBOOK OR COURSE MATERIAL INFORMATION A. Textbook

- Process Instrumentation, 2<sup>nd</sup> Ed. 2020, NAPTA, Pearson Publisher. ISBN: 978-0135213926 (required)
- 2. Safety Glasses (required)

Required course materials are available at the Brazosport College bookstore, on campus or online at <u>http://brazosport.edu/bookstore/home.html.</u> A student of this institution is not under any obligation to purchase a textbook from the college bookstore. The same textbook is/may also be available from an independent retailer, including an online retailer."

**For Distance Education Courses include the following:** Contact the Brazosport College Bookstore with a credit card for course materials. Phone: 979-230-3651. Fax: 979-230-3653. Email:<u>bookstore@brazosport.edu</u>. Website: <u>http://brazosport.edu/bookstore/home.html</u>

#### **B.** Course Outline

This course consists of four units, covering 23 chapters. Appropriate laboratories are included.

WEEK #	TOPIC
08/24/20	CHAPTER 1 Introduction and Process Variables
08/31/20	CHAPTER 2 Process Variables, Elements, and Instruments: PRESSURE CHAPTER 3 Process Variables, Elements, and Instruments: TEMPERATURE

09/07/20       CHAPTER 4 Process Variables, Elements, and Instruments: LEVEL         CHAPTER 5 Process Variables, Elements, and Instruments: FLOW         09/14/20       Exam 1, Lab 1         09/21/20       CHAPTER 6 Process Variables, Elements, and Instruments: ANALYTICS CHAPTER 7 Process Diagrams and Instrumentation Symbology         09/28/20       CHAPTER 8 Switches, Relays, and Alarms CHAPTER 9 Signal Transmission and Conversion         10/05/20       Exam 2, Lab 2         10/12/20       CHAPTER 10 Introduction to Control Loops: Simple Loop Theory CHAPTER 11 Control Loops: Primary Sensors, Transmitters, and Transducers         10/19/20       CHAPTER 12 Control Loops: Controller and Final Control Element Overview CHAPTER 13 Control Loops: Control Valves and Regulators         10/26/20       CHAPTER 14 Controllers CHAPTER 15 Control Schemes         11/02/20       CHAPTER 16 Advanced Control Schemes CHAPTER 17 Introduction to Digital Control CHAPTER 18 Programmable Logic Controls	09/07/20	CHAPTER 4 Process Variables, Elements, and Instruments: LEVEL
09/14/20Exam 1, Lab 109/21/20CHAPTER 6 Process Variables, Elements, and Instruments: ANALYTICS CHAPTER 7 Process Diagrams and Instrumentation Symbology09/28/20CHAPTER 8 Switches, Relays, and Alarms CHAPTER 9 Signal Transmission and Conversion10/05/20Exam 2, Lab 210/12/20CHAPTER 10 Introduction to Control Loops: Simple Loop Theory CHAPTER 11 Control Loops: Primary Sensors, Transmitters, and Transducers10/19/20CHAPTER 12 Control Loops: Controller and Final Control Element Overview CHAPTER 13 Control Loops: Control Valves and Regulators10/26/20CHAPTER 14 Controllers CHAPTER 15 Control Schemes11/02/20CHAPTER 16 Advanced Control Schemes CHAPTER 17 Introduction to Digital Control	09/07/20

#### **Important Semester Dates:**

Last Day to Withdraw from Classes– Check BC Academic Calendar at http://catalog.brazosport.edu/index.php

#### **Office Hours:**

For fulltime faculty, office hours may change from semester to semester. Current faculty office hours are included on the syllabus, see link: <u>https://brazosport.edu/faculty-and-staff/resources/course-syllabi-instructor-information/</u>

For an adjunct faculty, no office hours are required, and they are not assigned an office. To set up an appointment with an adjunct, contact the instructor as per the email address on the syllabus, see link: <u>https://brazosport.edu/faculty-and-staff/resources/course-syllabi-instructor-information/</u>

## V. STUDENTS WITH DISABILITIES

Brazosport College is committed to providing equal education opportunities to every student. BC offers services for individuals with special needs and capabilities including counseling, tutoring, equipment, and software to assist students with special needs.

For student to receive any accommodation, documentation must be completed in the Office of Disability Services. Please contact Phil Robertson, Special Populations Counselor at 979-230-3236 for further information.

## VI. TITLE IX STATEMENT

Brazosport College faculty and staff are committed to supporting students and upholding the College District's non-discrimination policy. Under Title IX and Brazosport College's policy FFDA (Local), discrimination based on sex, gender, sexual orientation, gender identity, and gender expression is prohibited. If you experience an incident of discrimination, we encourage you to report it. While you may talk to a faculty or staff member at BC, please understand that they are "Responsible Employees" and must report what you tell them to college officials. You can also contact the Title IX Coordinators directly by using the contact information below. Additional information is found on the Sexual Misconduct webpage at www.brazosport.edu/sexualmisconduct.

## VII. ACADEMIC HONESTY

Brazosport College assumes that students eligible to perform on the college level are familiar with the ordinary rules governing proper conduct including academic honesty. The principle of academic honesty is that all work presented by you is yours alone. Academic dishonesty including, but not limited to, cheating, plagiarism, and collusion shall be treated appropriately.

Academic dishonesty violates both the policies of this course and the Student Code of Conduct. In this class, any occurrence of academic dishonesty will be referred to the Dean of Student Services for prompt adjudication, and may, at a minimum, result in F, in this course. Sanctions may be imposed beyond your grade in this course by the Dean of Student Services. Please refer to the Brazosport College Student Guide for more information. This is available online at <a href="http://brazosport.edu/students/for-students/student-services/">http://brazosport.edu/students/for-students/student-services/</a>.

## VIII. ATTENDANCE AND WITHDRAWAL POLICIES

Class attendance contributes to your final grade, but you must attend class to successfully complete the course. If you are unable to complete this course, you must complete and submit a withdrawal form with the registrar's office. If the student decides to drop out of the class, it is the responsibility of the student to initiate a withdrawal before the withdrawal deadline in order to get a "W" on their transcript. If this is not done the student will receive a grade based on test grades and class grades earned during their attendance and absence (i.e. zeros on all missed materials, exams, skills tests, and final exam).

## IX. COURSE REQUIREMENTS AND GRADING POLICY TESTING MAKE-UP POLICY

A.	<b>Grading</b> :
1 .	Or aung.

Attendance	10%
Laboratory Activities	25%
Class Activities/HW/Quizzes	15%
3 Exams	37.5% (12.5% each)
Finals	12.5%

PTAC 1432 Process Instrumentation I

Grades are assigned as follows:

Grade	Final Average
А	90-100
В	80-89
С	70-79
D	60-69
F	Below 60

## X. STUDENT CONDUCT STATEMENT

Students are expected to be aware of and follow the Brazosport College Student Code of Conduct. Students have violated the Code if they "fail to comply with any lawful directions, verbal or written, of any official at BC." Lawful directions include precautions and requirements taken to prevent the spread of COVID-19 at Brazosport College. Students who do not follow safety requirements, including the wearing of a mask, may be removed from class by their instructor and referred to the Dean of Student Services.

## XI. COVID-19 STATEMENT

At Brazosport College, all of us, including faculty, staff and students, share a common goal this spring semester, to keep our classes running in the safest manner possible and avoid any disruption to your progress in achieving your educational and career goals. To that end, we ask and encourage you to conduct yourself in the following manner while on campus this semester:

- Every day, perform a self-health check prior to coming to campus and stay home if sick.
- To the greatest extent possible, maintain your distance between you and other students, faculty, and staff while on campus.
- Wear a properly fitted face covering over your mouth and nose while indoors on campus. If you do not have a mask, they will be available to you in all classrooms this spring.
- Practice good hygiene, washing your hands regularly and/or using hand sanitizer.
- The most effective way to protect yourself from Covid-19 is through vaccination. The vaccine is readily available and at no cost to you. Vaccine information and availability can be found at <u>https://brazosport.edu/coronavirus/vaccine/</u>.

If at any time this semester you begin to experience Covid symptoms, or if you are exposed to someone who has tested positive for Covid-19, please take the following steps:

- Stay home if you're feeling sick and minimize your contact with others.
- Alert the College by completing the Covid-19 Exposure Report Form online at <u>https://brazosport.edu/coronavirus/report/</u>. Be sure to provide accurate contact information, including a <u>working phone number that you will answer</u>.
- After submitting the report, you will be promptly contacted by a member of our Rapid Response Team, who will ask you some specific questions about your situation and provide you with guidance moving forward.

• If it is determined that you should not come to class, your instructor will be notified. Please know that your instructor will consider course adjustments and potential make-up work <u>only if your case has been reported</u> to Brazosport College, and they've been notified by our response team. Your instructor will work with you to determine how to manage any make-up work.

The Community Health Network (CHN) Clinic at Brazosport College is located in BC Central B-Wing. While walk-ins are available, your visit will be easier if you pre-register by creating an account at <u>www.mychn.org</u>. In addition to providing health and behavioral services, CHN also provides COVID vaccinations and testing. All insurance is accepted, and healthcare is provided on a sliding scale including no cost for those who need it.

Throughout the semester, please regularly check the College's Covid-19 information page at <u>https://brazosport.edu/coronavirus/</u>, where the latest updates and guidelines will be posted. As members of the BC community, all of us share a responsibility to each other to be as safe as possible.

#### XII. CAMPUS CLOSURE STATEMENT

Brazosport College is committed to the health and safety of all students, staff, and faculty and adheres to all federal and state guidelines. The College intends to stay open for the duration of the semester and provide access to classes and support services on campus in the safest way possible. The College will also comply with lawful orders given by applicable authorities, including the Governor of Texas, up to and including campus closure. It is possible that on campus activities may be moved online and/or postpone if such orders are given.

#### XIII. STUDENT RESPONSIBILITIES

Students are expected to fully participate in this course. The following criteria are intended to assist you in being successful in this course:

- 1. Understand the syllabus requirements
- 2. Use appropriate time management skills
- 3. Communicate with the instructor
- 4. Complete course work on time, and
- 5. Utilize online components (such as Desire2Learn) as required

#### a. Class attendance

Much of the learning occurs in the classroom setting and cannot be made up by reading the textbook. Therefore, class participation is essential to your learning, and attendance is taken.

#### b. Homework

As a standing homework assignment, students should review and read the scheduled sections of the textbook before coming to class and prepare questions for class discussion. Students should again review the scheduled section following the class (review forward, read, review back)

## c. Class participation

Participation grade is based on the quality (not frequency) of your contributions to laboratory and class activities. Those receiving high grades in class participation will be those who:

- 1. Are prepared for class
- 2. Arrive for class on time
- 3. Have excellent attendance
- 4. Make comments and ask questions that significantly contribute to the learning environment of the class

## d. Lab participation:

- a. Students are expected to come to lab every night prepared for lab activities. This includes the following:
  - 1. Having their lab books or materials.
  - 2. Wearing the proper attire to perform the lab as outlined in the lab safety procedures.
  - 3. Having the proper attire for the lab as outlined in the lab safety procedures.
  - 4. Arriving to lab on time. Lab attendance will be counted separately from lecture attendance.
- b. Failure to meet any or all of the above participation requirements will result in a loss of points for that lab.
- e. **Exams:** Exams will be taken electronically, during scheduled class time. It is the student's responsibility to ensure that they have access to D2L prior to taking the exam.
  - a. Make-up exams will be given at the discretion of the instructor. If the make-up exam is permitted, it must be completed within 7 days of the missed exam. There will be NO extension to this timeframe.
  - b. Make-up exams will be penalized 10 points, making the exam only worth 90% of the initial possible score.

## XIV. OTHER STUDENT SERVICES INFORMATION

Information about the Library is available at <u>http://brazosport.edu/students/for-students/places-services/library/about-the-library/</u> or by calling 979-230-3310.

For assistance with online courses, an open computer lab, online and make-up testing, audio/visual services, and study skills, visit Learning Services next to the Library, call 979-230-3253, or visit <u>http://brazosport.edu/students/for-students/places-services/learning-services/</u>.

For drop-in math tutoring, the writing center, supplemental instruction and other tutoring including e-tutoring, visit the Student Success Center, call 979-230-3527, or visit /<u>http://brazosport.edu/students/for-students/student-success-center/math-center/.</u>

To contact the Physical Sciences and Process Technology Department call 979-230-3618.

The Student Services provides assistance in the following:

Counseling and Advising	979-230-3040
Financial Aid	979-230-3294
Student Life	979-230-3355

To reach the Information Technology Department for computer, email, or other technical assistance call the Helpdesk at 979-230-3266.

Get the information you need – when you need it. Click <u>http://geni.us/BRAZO</u> to install **BC Connect** on your mobile device to receive reminders, explore careers, map your educational plan, be in the know about events, find out about scholarships, achieve your goals and much more.
